

Skill System 3-Layer Architecture

Complete chain from user intent to tool execution

Layer 1: Agent Decision Layer

"User wants to find Zhang San's order in the database" — Understand user intent, decide what capability is needed

Intent Understanding

Layer 2: Skill System (Selection Layer)

Match the most relevant skill from skill registry — Keywords/BM25 Coarse Filter □ LLM Semantic Ranking

Skill Matching

Layer 3: MCP Client (Transport Layer)

Call corresponding MCP Server via MCP protocol — Standardized tool invocation, cross-app reuse

Tool Execution
